

```
public class SimpleInterest {  
    public static void main(String[] args) {  
        // Principal, Rate, and Time  
        double principal = 10000; // Principal amount  
        double rate = 5;          // Interest rate (per year)  
        double time = 2;          // Time in years  
  
        // Formula: SI = (P × R × T) / 100  
        double simpleInterest = (principal * rate * time) / 100;  
  
        // Display result  
        System.out.println("Principal: " + principal);  
        System.out.println("Rate of Interest: " + rate + "%");  
        System.out.println("Time: " + time + " years");  
        System.out.println("Simple Interest = " + simpleInterest);  
    }  
}
```
